FROM PLANNING TO OPERATION: LEGAL AND REGULATORY ROAD FOR OWF DEVELOPMENT

Baltic Integrid Conference
25 November 2016

Project Manager
Lasse Sundahl
Introduction to DONG Energy

Off shore wind costs decrease rapidly

Meshed grids seen from an off shore wind developer perspective

Off shore wind well positioned to lead the energy transition in the Baltic Sea Region

Key messages
“The project aims to...

...contribute to sustainable indigenous electricity generation,
...further integration of electricity markets and security of supply in the Baltic Sea Region (BSR)

by

...optimizing the potential and efficiency of offshore wind energy (OWE).

It will present plans for a coordinated Baltic Sea offshore grid and significantly reduce one of the most important bottlenecks for the development of renewable energy sources in the BSR.”
DONG Energy today

**Wind Power**
- Global leader in attractive offshore wind market
- Solid track-record in delivering large scale projects
- Cost-of-electricity being systematically reduced
- Robust and highly visible build-out plan
- Differentiated partnership model
- Attractive pipeline options post-2020

**Danish utility**
- #1 power distribution network in Denmark
- #1 residential and industrial energy sales position in Denmark
- #1 in Danish heat and power generation with a strong and increasing biomass position
- REnescience: Innovative bioenergy technology for waste treatment

**Oil & Gas**
- Focused position with activities in Denmark, Norway and UK
- Low-cost, low-risk core assets
- Managed for cash to support renewable growth
- Strong hedging position

---

Key figures 2015:
- DKK 70.8 Bn revenue
- DKK 18.5 Bn EBITDA
- ~6,700 employees

% share of capital employed as of 31 December 2015

---

DONG Energy Wind Power is the market leader within offshore wind

**DONG Energy Wind Power geographical footprint**

- Bay State Wind
- Ocean Wind
- Walney Extension
- West of Duddon Sands
- Isle of Man
- Barrow
- Burbo Bank Ext.
- Burbo Bank
- Gunfleet Sands 1 + 2
- Lincs
- Hornsea 1
- Race Bank
- Borssele 1+2
- Gunfleet Sands 3
- London Array
- Hornsea 2 + 3 + 4
- Homs Rev 1 + 2
- Hornsea 1 + 2
- Gode Wind 1
- Borkum Riffgrund 1
- Hornsea 1 + 2
- Gode Wind 2
- Gode Wind 3
- Gode Wind 2
- Borkum Riffgrund 2
- German Cluster
- Anholt
- Middelgrunden
- Avedøre
- Vindensby
- Nysted
- Hornsea 2 + 3 + 4
- Ocean Wind
- Bay State Wind

**Unparalleled experience and track record**

- 19 offshore wind farms in operation
- 9 offshore wind farms under construction
- 25 years of experience and track record in the offshore wind sector
- 13 Partnerships
- 7.5 million Europeans with clean electricity
- 3,009 MW Constructed capacity
- 2,000 Dedicated employees
- 4,440 MW under construction
- 3,103 MW World's leading operator

**SOURCE: DONG ENERGY**
Costs of offshore wind are falling rapidly, and we expect that the industry can continue to push costs down.

Offshore wind costs

Estimated at the year of contracting, EUR/MWh, 2016 prices

1: Average price for the electricity over the lifetime of the plant used as proxy for the levelised costs of electricity. It consists of a subsidy element for the first years and a market income for the remaining years of the 25 years lifetime. Discount rate of 3.5% used to reflect society’s discount rate. Market income based on country specific wholesale market price projections at the time of contracting.

Note: Exchange rate on July 7 2016 has been used. Adjustment of costs to account for the fact that the 2012 target was set for a UK project which primarily incl. costs of transmission and extra development costs.

(Das Investitionsvolumen beträgt mehr als 1 Mrd. Euro pro Projekt)
Who builds what? How to ensure competition and coordination to reduce costs?

Off shore wind cost reductions realised, but in some countries only for 70 – 80 pct. of total asset.
Meshed grid: Costs high, upfront and certain – benefits maybe higher, but slow and uncertain?

“Meshed grid entails higher initial costs than radial connections, however these costs are outbalanced by annual savings especially if the EU member states also coordinate reserve capacities.”

Offshore wind is a large scale renewable technology with growth rates exceeding other renewables

Offshore wind well positioned to lead the transition of the Baltic Sea Region

- Could drive employment through industry hubs utilising existing industry infrastructure
- Stable energy source increasing energy independence
- Decreasing costs

Offshore wind offers multiple advantages

**Utility size power generation**
659 MW Walney Extension will power more than 460,000 UK homes

**Offers +45% load factors**
Significantly higher than onshore wind and solar PV

**Rapidly declining cost**
Industry maturity, volume and technological development reduce LCoE

**Limited visual impact on landscape**
Wind farms are built far from shore

Source: Bloomberg New Energy Finance (BNEF)
1. Load factor is a performance indicator measuring to what degree a wind farm has produced according to the farms capacity (actual production / (capacity x hours in period))
2. According to BNEF, long-term offtake price required to achieve a required equity hurdle rate for the project
Key messages

→ Long term visions should support short term progress allowing incremental steps

→ Establish cash flow to support necessary development

→ Plan common target for region

→ Find solutions attractive to energy policy in all countries allowing for different levels of ambitions and stable investment climate

→ Off shore wind well positioned to drive the transition of the Baltic region
Thank you for your attention!
